The birth of UF keyboard

As an evolution of computer music continuously growing, it is no longer a dream to own a computer music production system at your own home. However there isn't a keyboard with the ability of advance technology, powerful, easy to use and easy to operate. Finally, in the year of 2004, after thorough preparation, the first UF keyboard came in front of us.

Virtual Firewire Synthesizer

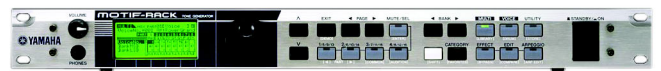

UF is the world first firewire expandable omnipotent master keyboard. Once you connect UF with external tone generator or software synthesizer through the integrated firewire or MIDI expansion board slot on its rear panel, you will get a powerful and multi-function synthesizer. With the firewire extension board including professional digital audio function, your UF is turned into a multi tracks digital recorder. You will enjoy synthesizer performance, MIDI recording and audio recording when your UF is connected to your computer.

CME

■ Superior classic metallic panel

Now, most of manufactures utilize the plastic material to make the body section to save the cost, but it also reduce durability, and makes the product lack of professional elegant quality. However UF all-in-one master keyboard insists in metallic body with cool pure black, at the first moment you touch UF, you will fall in love with it.

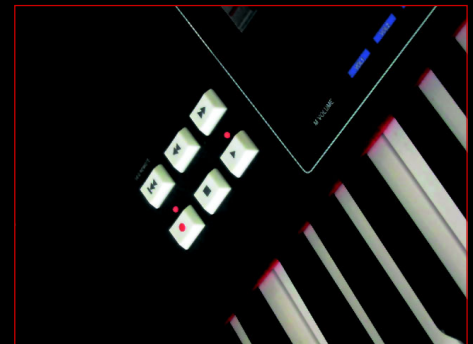

■ Hammer action grand piano weighted

UF8 utilize the 88 keys hammer action grand piano weighted, which possess numerous international technology patent, it provides you with the grand piano touch feeling as well as the reliable durability. UF8 can give you sufficient reasons to play it as a real grand piano.

■ Powerful and plenty of controllers

UF keyboard provides 8 knobs, 9 sliders, pitchbend wheel and modulation wheel, and this configuration is almost not available in other Japanese or American product. With UF serise, you can easily control your music as you wish in realtime. And the control buttons such as REC, PLAY, REW, can remotely control your sequencer software in your computer directly, to make your project easy.

■ Professional aftertouch design

■ Breath control interface especial for playing orchestral sounds

■ USB interface for MIDI data transfer and self-powered

■ Firewire audio expansion
