

CME Release Version 2.0 Firmware for New UF Series Keyboards

CME has announced latest version 2.0 firmware for their New UF series MIDI keyboards.

The CME New UF Series features a redesigned front panel providing more convenient control with many new shortcut functions and the addition of CME's U-CTRL functions. New MIDI features include a built-in USB plug-and-play interface, a MIDI In added to the expansion slot, and a built-in full duplex wireless MIDI interface with error detection and 262-foot range. The new UF Series is available in four models ranging from 49 semi-weighted keys to 88 hammer-action keys and include many of the control features of their predecessor, such as eight assignable control knobs, nine assignable control faders, six sequencer remote buttons, and 20 built-in memory locations.

The major changes of the firmware are:

UF v2.0 firmware:

- Adds Pro Tools modes in U-CTRL function,
- Adjusts the MIDI Route.
- Optimises the keyboard's velocity sensitivity.
- Optimises the keyboard's operating and display manner
- Rectifies the bank number error when sending the tone data
- Stabilises the pitch bend transferring data.
- Fixes known bugs and errors

The full update will be free. Users can download it from CME website and select the relevant model to upgrade.
